Content: section I. Reproduction and breastfeeding Control of the development of the gonads and the gametes control of ovulation and the body with the bodily reproductive cycles Gestation and births the breast glide reproductive physiology of the male section VII. The Cunningham veterinary book has questions and answers that will allow you to review the knowledge acquired with your reading. Other objectives are to publicize the reader the pathophysiology and the techniques of resolution of problems in order to help understand the relationship that exists between the physiology and the practice of veterinary medicine. Our intention is that this book totally accessible to students. The molecular and cellular bases of the cogic physiological regulation: Cellular proliferation, life expectancy and mortality Section II Neurophysiology Introduction Introduction to the nervous system The neuron Lower and upper motor and its central control alterations of the movement The vestibular system The cerebellum The autonomous nervous system The lump visual system cephaloraquilo and barrier hematocnefana electroencefalogram and potential evoked evoked sensitive audiñ Heart The Electrocardiogram The heart as a pump pulmonary and systemic circulations of the gastrointestinal tract Regulation of the gastrointestinal functions movements of the gastrointestinal tract secretions of the digestive system digestion and supervision: the non -fermentative processes digestion post-absorptive nutrients Section V Endocrinolog Endocrine system Endocrine cells and their function Section VI Reproduction and lactation Control of the development of the gA3nadas and the gametes Control of the ovulation and of the body limestone Since medicine studies the abnormal functions of the organism, to understand the mechanisms of the disease first one must understand physiology in normal conditions. It also incorporates a section of questions and answers, as an additional resource to review the contents of the book.
